### After Care Instructions

#### INSTRUCTIONS

##### SYNCOPE

1. You have been diagnosed with syncope (pronounced SINK-uh-pee).
2. This is the medical term for a rapid loss of consciousness or a fainting episode. There are many causes of syncope. Some of these are life-threatening and others are not serious. Most patients with life-threatening causes are admitted to the hospital for further testing. Patients without life-threatening conditions may be sent home.
3. Some non-life threatening causes of syncope include dehydration, heat exhaustion, vasovagal events (simple fainting), and side-effects from new medication.
4. Treatment of syncope depends on the cause. In general it is a good idea to drink plenty of fluids and avoid strenuous activity for at least 24 hours after fainting.
5. Follow up with your regular doctor within 3 days.
6. YOU SHOULD SEEK MEDICAL ATTENTION IMMEDIATELY, EITHER HERE OR AT THE NEAREST EMERGENCY DEPARTMENT, IF ANY OF THE FOLLOWING OCCURS:
  - You continue to faint (pass out).
  - You have any chest pain with your fainting.
  - You notice any palpitations or strange heart beats before fainting.
  - You notice any blood in your stools. Blood may be bright red or dark red or black and tar-like.
  - You feel weak or lightheaded or do not improve as expected.
  - You become worse or have other concerns.

##### RENAL INSUFFICIENCY

1. You have been diagnosed with a kidney problem. This problem is called renal insufficiency.
2. This means that your kidneys are not working correctly. Your kidneys get rid of the waste from your body. Many things can cause kidney problems. These include high blood pressure, certain medicines and dehydration. Kidney problems can also be caused by narrowing of the arteries that bring blood to them.
3. Your kidneys are not working as well as they should, but they are still doing their job. We feel that it's safe for you to go home. Make sure that your doctor knows about this. He or she will need to do more tests.
4. YOU SHOULD SEEK MEDICAL ATTENTION IMMEDIATELY, EITHER HERE OR AT THE NEAREST EMERGENCY DEPARTMENT, IF ANY OF THE FOLLOWING OCCURS:
  - You have shortness of breath or chest pain.
  - You have swelling in your abdomen (belly), legs or feet.
  - Shortness of breath that makes it hard to sleep at night.
  - You have fever (temperature higher than 100.4°F / 38°C).

#### MEDICAL RECORDS COPY

Patient: MRN: 313787 Encounter: 3032684 Page 1 of 2

TESTS PERFORMED

Lab, Radiology, and Other Testing included the following:

Lab Tests Performed:

CBC = Normal

Chem7 = Abnormal

Liver Enzymes = Normal

EKG = Normal

Cardiac Markers-Troponin = Normal

Cardiac Markers-CK/Mb = Normal

Ethanol Level = Normal

Tox Screen = Normal

TSH, ACETAMINOPHEN, SALICYLATE: NORMAL

FOLLOW UP

Follow up with your physician 24 hours. Call as soon as possible to arrange.

Follow up with TARIQ KAMIL, MD, at 568 Ruin Creek Rd, Suite 006, Henderson, NC, Phone: 252-436-1080 In 3-5 days. Call as soon as possible to arrange.

Any pain medication given to you while in the Emergency Department may affect your alertness and reflexes. You should not drive or operate machinery for at least 6 hours after leaving the Emergency Department.

STATEMENT

I certify that I have received a copy of the above after-care instructions; that these instructions have been explained to me; and that all of my questions pertaining to these instructions have been answered in a satisfactory manner.

**HPI**

Chief Complaint: Syncope PCP/Ref MD: NO. PHYSICIAN

History of present illness: (location, quality, severity, duration, time, context, modifying factors, associated symptoms)  
 The patient is a 37-year-old male to female transgender patient with history of [REDACTED] who presents to the emergency department for syncopal episode. She is currently in an all male prison, and transitioning to a female prison in 2 weeks. She states her current facility causes her a lot of emotional distress. She states today she was more stressed out than normal, she was crying a lot, had a few episodes of nausea and vomiting due to "being stressed out". She allegedly was vomiting, and had a syncopal episode in her cell. The presents staff told EMS that she was initially unresponsive for 1-2 minutes, had a blood pressure of 60 systolic. All of her blood pressures were normal, including their initial blood pressure upon arrival. Currently the patient is asymptomatic, has no complaint at this time. She states that she feels safe in her current facility, "I just want to go to a place that matches my gender".  
 No SI or HI.

Constitutional: See HPI  
 Eyes: No change in vision  
 ENT: No sore throat, nasal drainage/ congestion  
 CVS: No chest pain, palpitations  
 Respiratory: No dyspnea, cough  
 GI: No abdominal pain, nausea, vomiting, diarrhea, melena, or rectal bleeding  
 GU: No dysuria, hematuria, frequency or urgency  
 Musculoskeletal: No extremity pain or swelling  
 Skin: No rash  
 Lymph: No swollen glands, leg, or ankle swelling  
 Neuro: See HPI  
 Psych: No anxiety or depression

GENERAL APPEARANCE: Well developed, well nourished, alert and cooperative, and appears to be in no acute distress.  
 HEAD: normocephalic  
 EYES: PERRL, EOMI, vision is grossly intact.  
 ENT: hearing grossly intact No nasal discharge. Oral cavity and pharynx normal.  
 CARDIAC: Normal S1 and S2. No S3, S4 or murmurs. Rhythm is regular. No peripheral edema, cyanosis or pallor. Extremities are warm.  
 LUNGS: Clear to auscultation bilaterally. No wheezes, rales, or rhonchi.

Patient: [REDACTED] MRN: 313787 Encounter: 3032684 Page 1 of 6

ABDOMEN: Soft, nontender, nondistended. No guarding or rebound. No masses.  
 BACK: No tenderness to palpation, no CVA tenderness  
 EXTREMITIES: No significant deformity or joint abnormality. No edema. Peripheral pulses intact.  
 NEUROLOGICAL: No focal deficit, moves extremities equally, ambulates without difficulty  
 SKIN: Skin normal color, texture and turgor with no lesions or eruptions.  
 PSYCHIATRIC: AOX4. The patient was able to demonstrate good judgement and reason, without hallucinations, abnormal affect or abnormal behaviors during the exam

**Medications Ordered**

Ord. Status	Proc. Status	Desc.	Freq.	Ord. By
Active		NS 0.9 1,000 ML IV	ONCE	STEIGERWALD, MICHAEL L.

**Procedure(s)/Critical Care Time**

EKG: Time: 4:36 p.m., rate: 72, sinus rhythm, normal axis, normal intervals, normal ST/T segments. No STEMI. Specifically, no evidence of ACS, arrhythmia, Brugada, WPW, HCM, arrhythmogenic right ventricular cardiomyopathy

**Medical Decision Making**

The patient is a 37-year-old male to female transgender patient with history of [REDACTED] who presents to the emergency department for a syncopal episode after an episode of nausea and vomiting. According to the facility, her blood pressure was initially in the 60s systolic, she was unresponsive for 1-2 minutes, then regained consciousness and was back to normal. Her physical exam is very reassuring, likely vasovagal secondary to vomiting. Plan to monitor, perform frequent vital sign rechecks, labs, re-evaluate. I do not believe she needs imaging at this time.

The patient's workup was relatively unremarkable as above, she remained unresponsive throughout her stay. She has a mildly

elevated BUN/creatinine, unclear what her baseline is. Perhaps secondary to her medication. Plan to refer to Nephrology. Otherwise, she is requesting discharge. I counseled the patient and prison guards on warning signs, and strict ED return guidelines. They acknowledged understanding and did not have any further questions.

**Final Diagnosis:** (simple, severe, acute, chronic, exacerbation of chronic, etc.)

Syncope

**Disposition**

Disposition Time: 1910      Discharge      Transfer      Admit      To:

<sup>3</sup>First repeat Lactic Acid has been ordered based upon Sepsis Protocol.

Second repeat Lactic Acid at 6 hours, has been ordered based upon Sepsis Protocol.

<sup>4</sup>Note: Per Beckman Coulter, Inc, "The medications Temozolomide, Metamizole (Dipyrone), Sulfasalazine, and Sulfapyridine may interfere and falsely depress results for this assay."

<sup>5</sup>Result was changed by IF on 08/06/2019 16:22. The result was previously reported as no value.

<sup>6</sup>Troponin Result Evaluation:

0.00 - 0.04 ng/ml = normal

0.04 - 0.06 ng/ml = elevated. Reported with "H" flag.

> 0.06 = reported as "HC" (High Critical)

Test performed by Siemens Centaur TnI-Ultra assay. The 99<sup>th</sup> percentile troponin level as defined by WHO guidelines for this assay is 0.04 ng/mL. Troponin I results that demonstrate a rising or falling pattern with at least one value above 0.04 ng/mL and accompanied by clinical presentation of acute myocardial necrosis and EKG or imaging evidence of ischemic myocardial damage are indicative of MI. Note that one troponin I result > the 99<sup>th</sup> percentile is not diagnostic, and also that a stable pattern of elevated troponin results is not indicative of MI.

Note: The manufacturer has confirmed that this analyte can be falsely depressed if:

1. N-Acetyl Cysteine (NAC) is administered in therapeutic concentrations for the treatment of acetaminophen overdose.
2. Medications Metamizole (Dipyrone), Sulfasalazine, or Sulfapyridine have been administered.

RESULTED TO MEGAN RN/ ED VRB BY SCG @ 1625.

Outpatient Program at WARREN CI.

**Reason for Call/Details**

Staff Psychologist was called by OIC on 08/06/2019 at 2042 hours. OIC informed staff psychologist that inmate had threatened to kill himself after returning from the hospital due to not wanting to return to his cell in Restrictive Housing (RH). Inmate was believed to have been using the drug "K2" earlier, and was described as being "high" by Corrections staff. Inmate was placed on SIB precautions as a result.

**Immediate Plan**

Inmate ██████████ will be placed on Self-Injury Precautions and will be seen for a re-evaluation within 24 hours.

**Follow Up**

Within 24 hrs

**New Non-Medication Orders:**

Level of Consciousness: Alert and Oriented  
 Psychomotor Activity: Restless  
 General Appearance: Neat/well groomed  
 Behavior: Cooperative  
 Mood: Anxious  
 Thought Process: Goal Directed  
 Thought Content: Normal

Anxious and tearful with congruent affect.

**RISK AND PROTECTIVE FACTORS ASSESSED:**

This writer screened the offender for a variety of empirically validated factors commonly associated with risk for self-harm.

The following **STATIC** risk factors were assessed to be present and may increase the inmate's risk for engaging in suicide related behaviors: History of inpatient psychiatric treatment, History of mental illness, History of self-injurious behavior

The following **DYNAMIC** risk factors were assessed to be present and may increase the inmate's risk for engaging in suicide related behaviors: Agitation, Anxiety/Panic

The following **PROTECTIVE** factors were assessed to be present and may decrease the inmate's risk of suicide: Able to cope with stress, Able to identify reasons to live, Adequate problem solving skills, Denial of suicidal ideation/intent/plan, Future orientation, Responsibility to loved ones/children, Social support in the institution, Supportive family relationships, View of death as negative, Willingness to engage in treatment

Some risk and/or protective factors were not assessed, and their impact on this inmate's risk for suicide related behavior is undetermined; the reason they were not assessed is stated below.

Offender Name: [REDACTED], [REDACTED] Off #: 0618705  
Date of Birth: [REDACTED] Sex: M Facility: WARR  
Date: 08/07/2019 10:30 Provider: Hodges, Rayshone Psy.D Contract Psychologist

Ms. [REDACTED] was tearful but readily available to dialogue. She denied having any suicidal thoughts or intentions. She mentioned being anxious and somewhat hypervigilant about transitioning to a Women's prison in "two weeks." She recalled having a "breakdown yesterday" where she became tearful, confused, and frustrated. She felt that Custody accused her of being "high" but she attributed her increased emotionality to "hormones" and being impatient about her scheduled facility transfer. She felt "misunderstood" and wondered why there was no "case manager/mental health provider" who could see her for crisis situations. In addition, she wanted to speak to her assigned clinician, Dr. Hahn, and to be "left alone (by other staff members who accuse her of being high on K-2)."

Ms. [REDACTED] contracted for safety. She wants to return to her original cell. She identified her coping skills as reading, talking with peers (in-person and via telephone), and journaling. She asserted that she has never attempted suicide and she values her life. She reported having negative drug screens for K-2 despite "what they (Custody) believes about me." She highlighted the current dilemma of being transgendered in an all male facility, especially one who will be the first to move into a female prison. Lastly, Ms. [REDACTED] identified future orientation, appropriate coping skills, and has ongoing support in this facility. Dr. Hahn will be made aware of this recent incident, and Ms. [REDACTED] will be seen more frequently either by Dr. Hahn or the current mental health staff. She will be removed from Self-Injury Precautions.

**RECOMMENDATIONS**

**Suicide Watch: Discontinue from all Self-Injury Precautions.**

**Suicide Watch was initiated on: 08/06/2019 20:42**
